May 31, 2026

Dear Hiring Manager,

I am an Automation Architect and Senior SDET with 15+ years of enterprise quality engineering experience across Insurance, Banking, Retail, and Telecom. I specialize in building scalable automation frameworks from scratch and embedding quality into CI/CD pipelines — with a GCP Cloud Architect certification that bridges test engineering and DevOps.

At TCS, I have delivered measurable outcomes for global clients including Allianz, Home Depot, and Commonwealth Bank. Most recently, I reduced regression cycles by 75% through a Dockerized Selenium Grid and cut false-failure alerts by 60% by overhauling flaky test protocols. Earlier, I co-developed the RAFT/TAM/eRAFT frameworks adopted by JPMorgan Chase, Bank of America, and Humana across TCS accounts globally.

I am remote-ready with 9+ years of international on-site delivery and am confident I can create immediate impact in this role. I would welcome a conversation at your convenience — thank you for your time.

Warm regards,

Guruvaiya Muthukaruppan
